

Engineering Projects & New Services

EPNS stands for Engineering Projects & New Services. Our networked team for software and various cetecom advanced solutions, such as robot systems, not only deals with the development and programming of software, but also with the conception, tests, commissioning and the support during the pilot phase of the product development. With our way of interdisciplinary work and our infrastructure for fast and flexible solutions, we have created our own competence centre for software solutions – even for challenging requirements of our customers.

OUR EPNS TEAM THINKS AHEAD FOR YOU AND CREATES TODAY THE SOLUTIONS FOR YOUR NEEDS OF TOMORROW

TEST SOLUTIONS, QUALITY ASSURANCE AND AUTOMATION ENGINEERING

In the area of our core competence, testing and certification, we offer both existing and individual, innovative hardware and software solutions, tailored to the requirements of our customers.

After a comprehensive needs analysis, we create a plan with test solutions that fit your individual needs.

Let us introduce our expertise and some of the solutions we offer:

Experience and Expertise

- Wide range of testing services
- Development of own lab systems and test applications
- Creation of individual tests on behalf of client requests
- Downscaling of a whole range of systems to the needs of the customer
- Comprehensive solutions based on hardware and software
- Design and construction of hardware
- Many years of experience in the field of robot automation
- Integration and commissioning of robot systems

Application areas for existing systems

- Quality assurance
- Adaptation to customer requirements
- Validation and Debugging of products in the development state
- Certification of devices according to defined standards

Creation of individual solutions through

- Our knowledge and experience in various fields
- The access to existing modular software solutions
- Available interfaces to test automation
